PUBLIC SCOPING MEETING

*For the Payara Development Project
Esso Exploration & Production Guyana Limited (EEPGL)*

Region 5

Date: March 13, 2019

Time: 10:00h

Venue: Hopetown Multipurpose Cooperative Society Building

*This is your opportunity to:
Learn more about the project – Tell us how you think the project will impact you – Share your ideas*

As part of the regulatory process, Esso Exploration and Production Guyana, Ltd. submitted an application to the Environmental Protection Agency (EPA) for Environmental Authorisation for a potential Payara Development Project.

The potential concept involves a third floating, production, storage and offloading vessel (FPSO) and related subsea equipment, umbilical, risers, and flowlines. The proposed development concept is similar to that of Liza Phase 1 and Phase 2 projects.

Approximately 35-45 wells may be drilled from ten subsea drill centers, consisting of a combination producers and injectors to support production of oil, injection of water and reinjection of associated gas. These subsea facilities include various types of equipment, pipelines and hardware. The subsea facilities allow the oil from the wells to be gathered and moved to the FPSO for further processing.

The FPSO will have an estimated production capacity of approximately 180,000-220,000 barrels of oil per day.
